Nuestra ref.: 00858/2019/WDS/AEM/Global Survey

25 de enero de 2019

Anexo: 1 (disponible en inglés solamente)

Asunto: Encuesta Mundial de 2019 de la CMAe – Análisis de sensibilidad sobre la futura prestación de servicios meteorológicos aeronáuticos

Finalidad: Completar el cuestionario en línea a más tardar el **28 de febrero de 2019**

Estimado señor/Estimada señora:

Cúmpleme referirme a la Decisión 42 adoptada en la 69<sup>a</sup> reunión del Consejo Ejecutivo de la Organización Meteorológica Mundial (OMM) en la que, entre otras cosas, se pedía al presidente de la Comisión de Meteorología Aeronáutica (CMAe) que, en colaboración con los presidentes de las asociaciones regionales, elaborara una metodología y llevara a cabo un análisis de sensibilidad de diversas situaciones hipotéticas de prestación futura de servicios meteorológicos para la aviación, que incluyera el grado de participación de los proveedores del sector privado, con miras a evaluar las posibles repercusiones tanto en los Servicios Meteorológicos e Hidrológicos Nacionales (SMHN), dada su condición de proveedores de servicios de meteorología aeronáutica, como en los niveles de calidad del servicio resultantes, y emplear la información analítica obtenida para fundamentar la planificación de las actividades de la OMM relacionadas con la aviación en el futuro.

A este respecto, me complace comunicarle que la CMAe llevará a cabo una encuesta mundial, por medio de un cuestionario en línea, del 1 al 28 de febrero de 2019. La encuesta mundial es concisa y completarla no llevará más de 10 a 15 minutos. La encuesta está disponible en inglés únicamente. A modo de referencia, se adjunta una nota conceptual relativa al análisis de sensibilidad (véase el anexo).

Se ruega a los Miembros que completen la encuesta mundial (cuestionario en línea) no más tarde del **28 de febrero de 2019** a través del siguiente enlace:

<https://www.research.net/r/caem-global-survey-2019>

Sírvase tomar nota de que solo puede recibirse una respuesta por Miembro, no se aceptarán varias respuestas.

Los resultados de la encuesta se recopilarán y se analizarán a escala mundial y regional y serán publicados por la OMM a su debido tiempo. Por lo tanto, los resultados no se atribuirán a ningún Miembro ni se publicarán las respuestas individuales.

A los Representantes Permanentes (o Directores de los Servicios Meteorológicos o Hidrometeorológicos) de los Miembros de la OMM

copias: Presidente de la Comisión de Meteorología Aeronáutica  
 Presidentes de las asociaciones regionales

Si tuviera alguna pregunta con respecto a la encuesta mundial, o problemas para acceder a ella, no dude en ponerse en contacto con la Secretaría de la OMM ([aviation@wmo.int](mailto:aviation@wmo.int)).

Le saluda atentamente.

(W.Zhang)  
por el Secretario General

## **Concept Note**

### **Sensitivity analysis of various scenarios of future aeronautical meteorological service provision**

Ref.: 00858/2019-12 WMO/CAeM

#### **Background**

Nearly all Members of WMO have designated responsibility to provide regulated aeronautical meteorological services in accordance with ICAO Annex 3 to the Convention on International Civil Aviation. The aeronautical requirement for meteorological service, as contained in ICAO Annex 3/WMO Technical Regulations (WMO-No. 49) Volume II, is fulfilled by Members at a national level usually through their national meteorological and hydrological service (NMHS) or by another entity (or entities).

Today, in a majority of cases – specifically 60% of Members according to a 2016/2017 global survey conducted by the WMO Commission for Aeronautical Meteorology (CAeM) – aeronautical meteorological service provision is fulfilled by NMHSs. However, the global survey identified that this majority was on a declining trend as other entities, including private sector enterprise, compete for and engage in the provision of meteorological service for international air navigation. The domain of the NMHS as the sole or *de facto* provider of regulated aeronautical meteorological services at a national level no longer holds for an increasing number of Members of WMO.

At the sixty-ninth session of the WMO Executive Council (EC-69 held 10 to 17 May 2017), the Council held a Special Dialogue on the future of aeronautical meteorological services (hereinafter referred to as the 'Special Dialogue'). The one-day Special Dialogue placed emphasis on how the needs and expectations of aviation users for meteorological service were evolving from a product-centric to a data-/information-centric approach and an increasingly regionalized and globalized approach to service delivery enabling a globally interoperable, harmonized air traffic management system of the future – as portrayed in the Global Air Navigation Plan (GANP) of the International Civil Aviation Organization (ICAO). EC-69 considered what activities Members of WMO, in particular, need to undertake now and into the future to respond to the demands of the aviation community.

Through Resolution 42 (EC-69), *Future of Aeronautical Meteorological Services*, the Council requested, *inter alia*, the president of CAeM in collaboration with presidents of regional associations to develop a methodology and to conduct a sensitivity analysis of various scenarios of future meteorological service delivery to aviation, including the degree of engagement with private sector providers, in order to assess the possible impacts both on NMHSs as aeronautical meteorological service providers and on the resulting service quality levels. The analytical information to be obtained from such a sensitivity analysis is intended to inform WMO's future planning of aviation-related activities.

#### **Methodology**

To address the EC-69 request for a sensitivity analysis, the CAeM will conduct a 2019 global survey with Permanent Representatives of all Members of WMO.

This 2019 CAeM global survey will be limited in scope compared with the 2016/2017 CAeM global survey.

The 2019 CAeM global survey *should not* take more than 10 to 15 minutes to complete and is available *only* in the English language.

Each question contains a statement (or statements) to which the Member (Permanent Representative) is expected to indicate their degree of agreement taking into account their national circumstances and professional opinion.

Only one completed response is required per Member. Multiple responses will not be accepted.

The results of the global survey will be collated on a global and a regional level and will be published in due course by WMO. As such, the results will not be attributed to an individual Member and individual responses will not be published.

## **Participation**

Only Permanent Representatives of Members of WMO are requested to participate in the 2019 CAeM global survey.

Consultation within the NMHS or with other aeronautical meteorological service provider(s) at a national level will be at the discretion of the Permanent Representative.

## **Duration**

The 2019 CAeM global survey will open to receive responses for a period of up to one month. A short extension may be granted depending on the response rate.

## **Reporting**

An analysis of the responses to the global survey will be conducted by the CAeM, with the assistance of the WMO secretariat, with a view to the development and publication of an analytical final report.

The outcomes of the global survey, collated on a global and a regional level, will be appropriately reported to WMO constituent bodies and other stakeholders concerned.
